# TREQ ONE

### INSTRUCTION MANUAL

The setup of your rig is very dependent on body type, personal seating preferences and the equipment you own, but to give you a head start, we included a setup scheme on the last page.

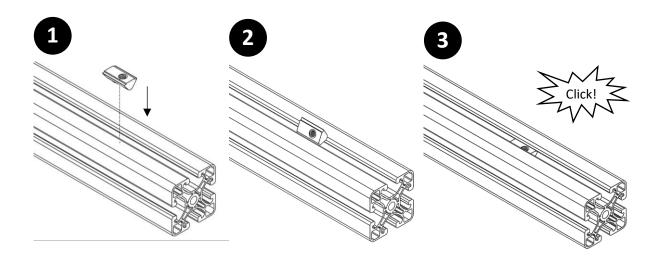

### **REQUIRED TOOLS:**

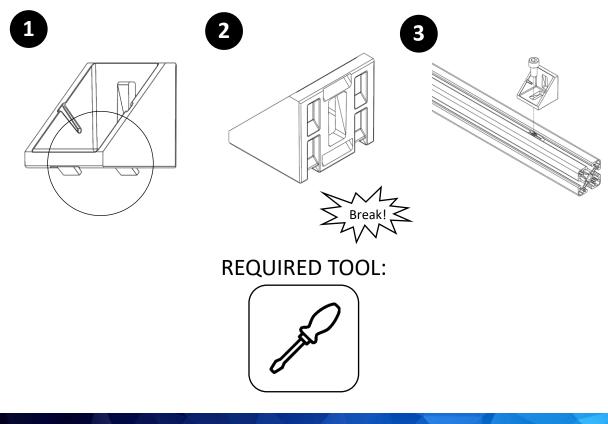

## **GENERAL INSTRUCTIONS**

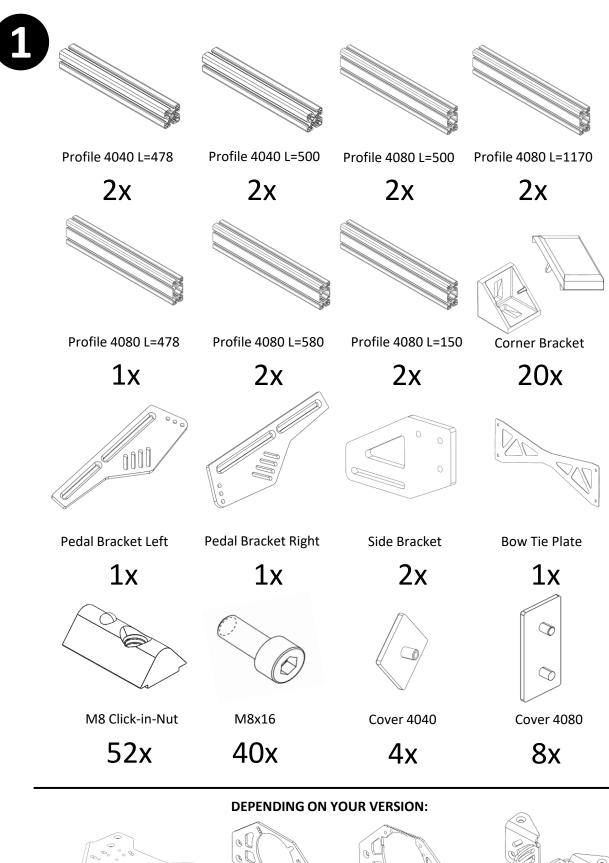

The easiest way to mount the click-in-nuts, is to slide them in from one side of the profile. But don't worry if you need to put in a click-in-nut in a profile which has both ends already closed: it is also possible to push them in the T-slot anywhere you like!

The corner brackets feature 4 little hooks to stop the bracket from rotating once it is mounted on a profile. But on some places of the rig these corner brackets are placed on a 90° angle of the T-slot. In these situations it is recommended to break off 2 of the hooks, which is easily done with a screwdriver or a pincer.

Wheel Deck

Front Mount

Asetek Mount

Side Mount

Bags with bolts, nuts and washers:

M8 BOLTS AND WASHERS	
M8x12 (Round Head) Black	4
M8x20 (Socket Head) Black	12
M8x20 (Sunken Head) Black	8
M8 Washer	8

#### PEDAL MOUNTING

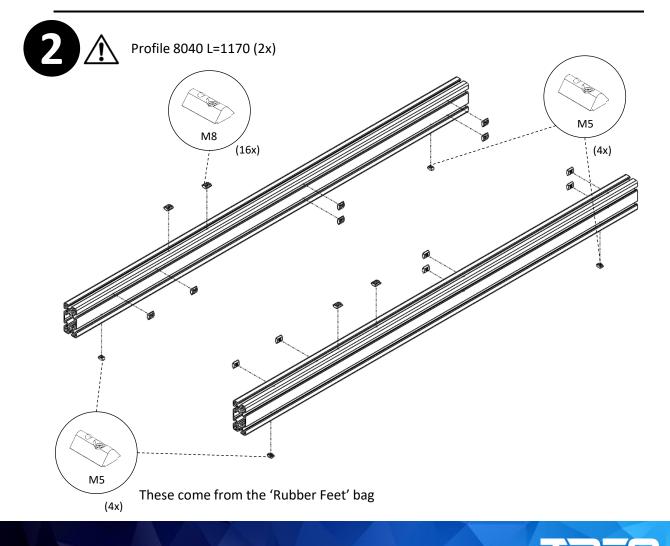

M6x12 Screw	2
M6x16 (Socket Head)	4
M6x20 (Socket Head)	2
M6x25 (Socket Head)	2
M6 Washer	4
M6 T-Nut Click-in-Nut	4

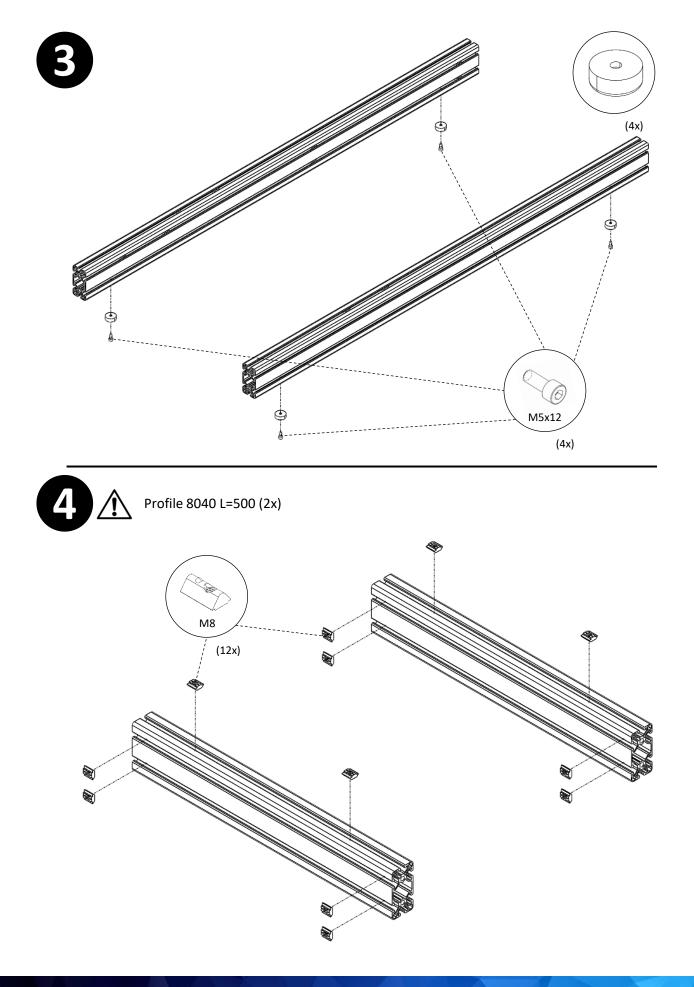

You can use these on any place you like. Either inside the profile slot (just turn the bolt through the tape), or by pasting them.

#### **RUBBER FEET**

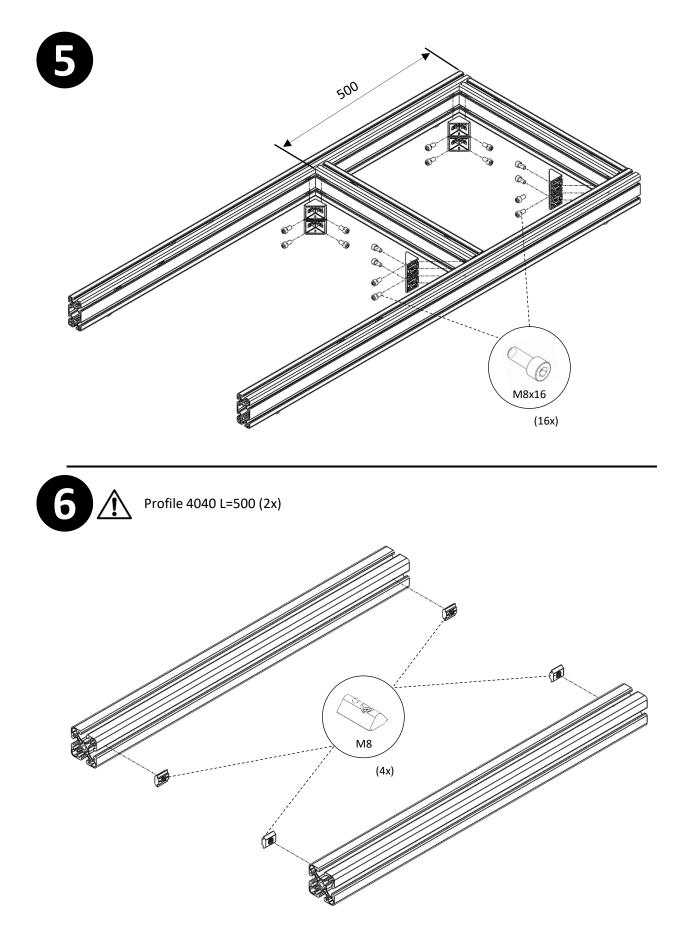

M5x12 (Socket Head)	4
M5 T-Nut Click-in-Nut	4
Rubber Foot	4

WHEEL MOUNTING	
M8x16 (Sunken Head)	4
M8 T-Nut Click-in-Nut	4
Wheel mount option specific set of bolts.	1

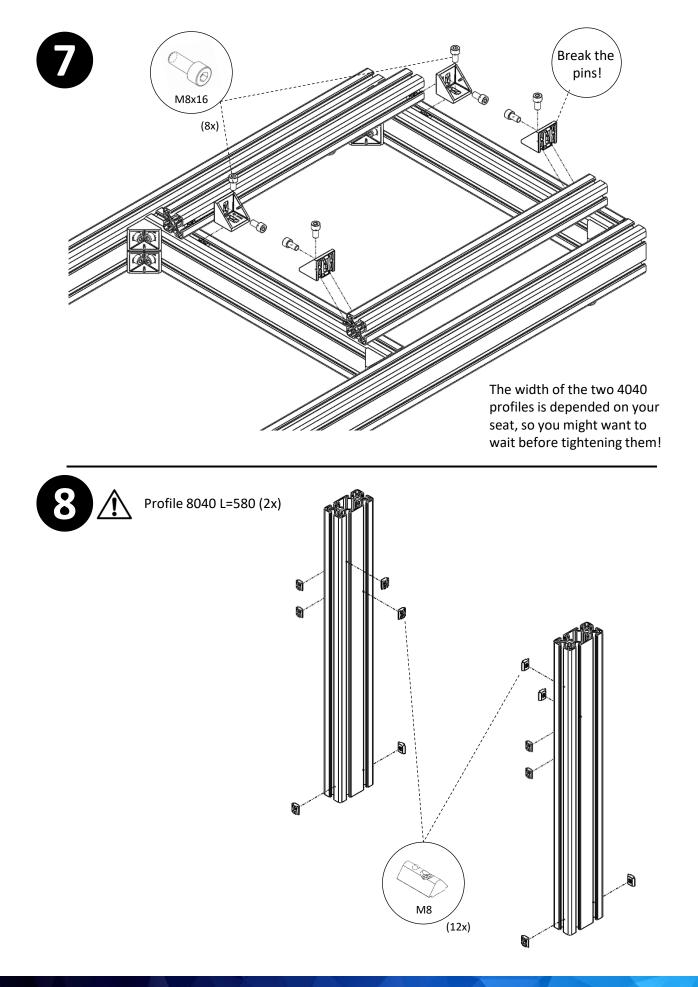

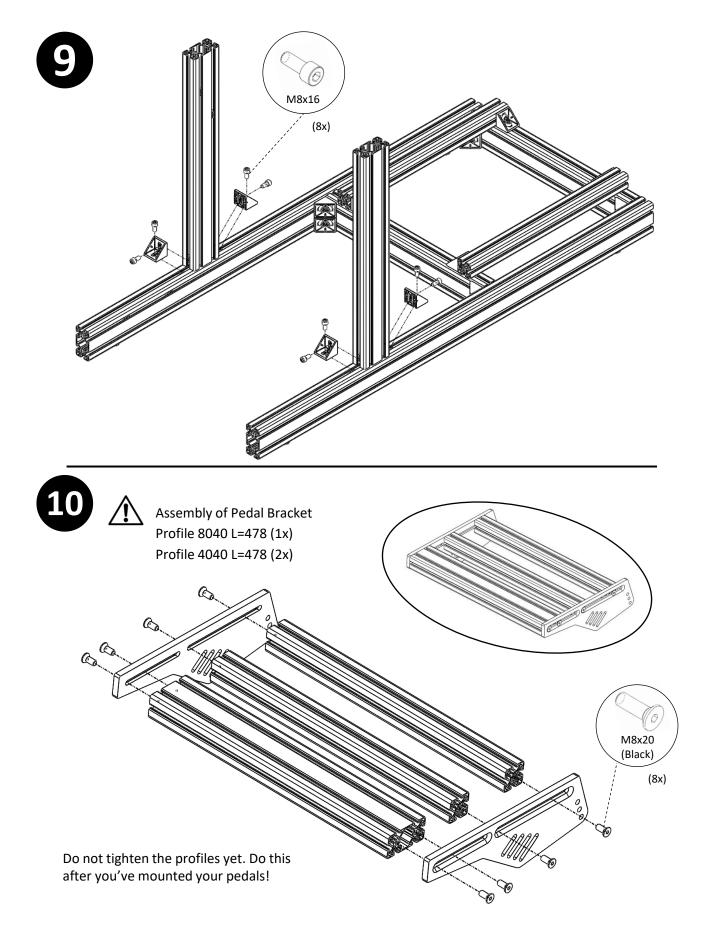

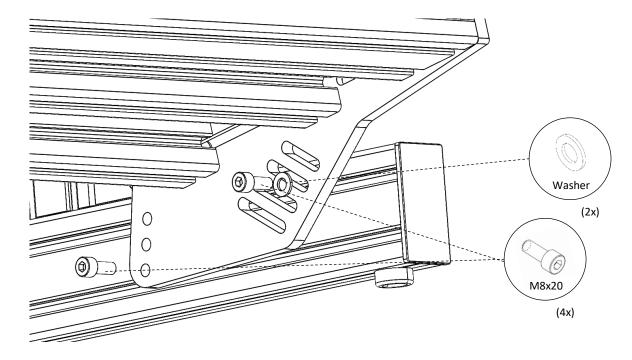

TREQ

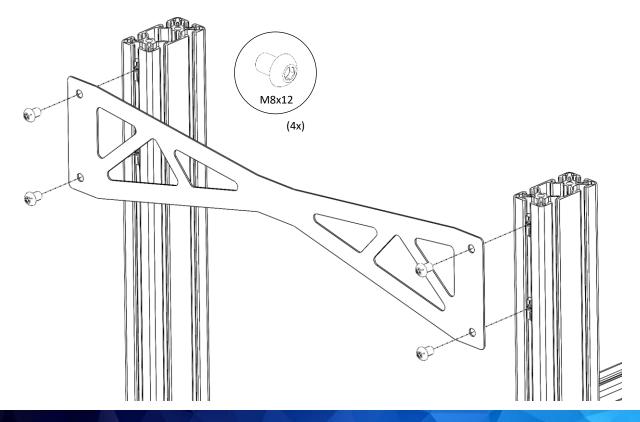

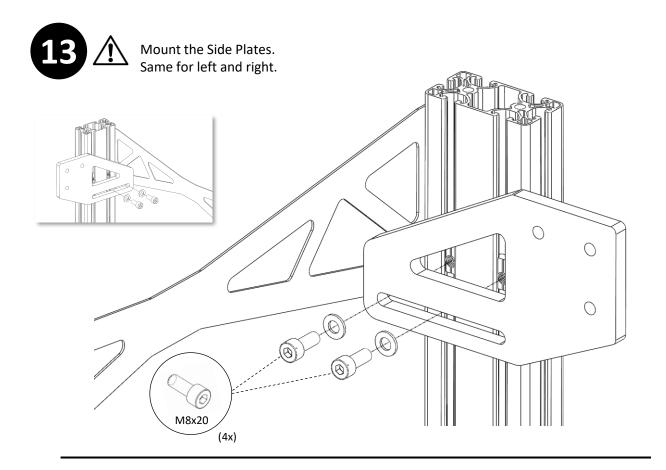

Assemble the Pedal Brackets on the frame. Choose which holes you want to use as a result of your desired Pedal Deck angle.

Assembly of the Bow Tie Do **NOT** tighten the screws yet.

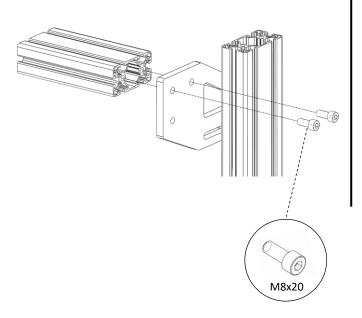

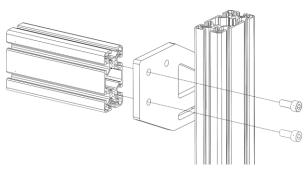

Mount the 150 profiles like this for the Wheel Deck.

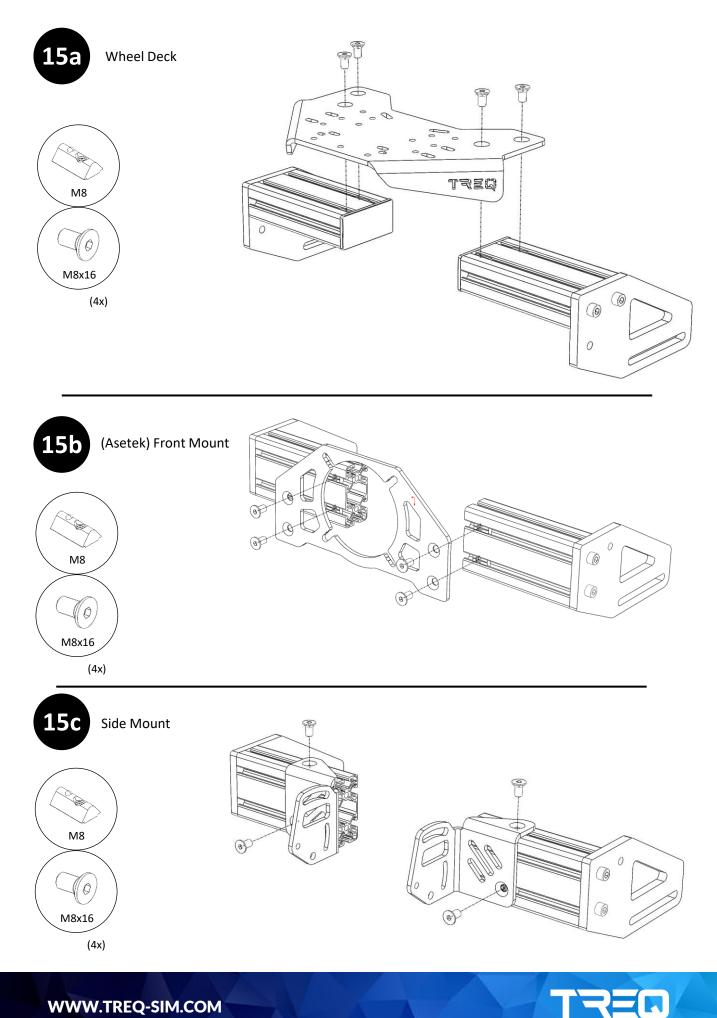

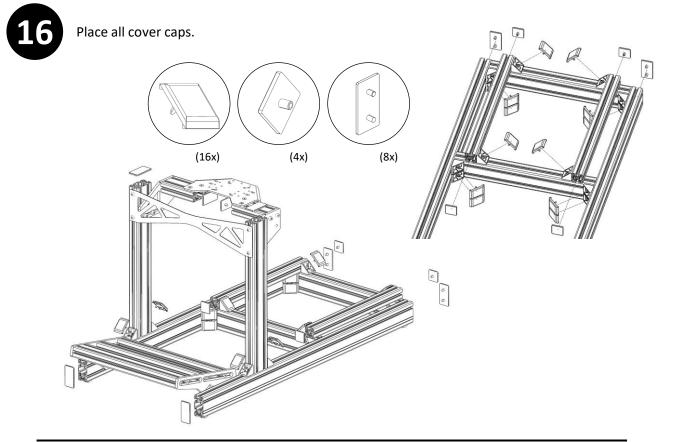

Mount the 150 profiles like this for the Front and Side Mount.

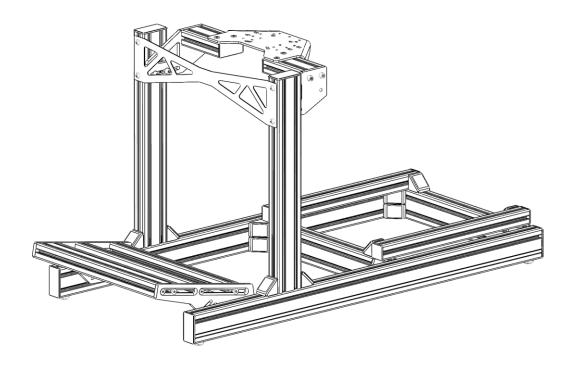

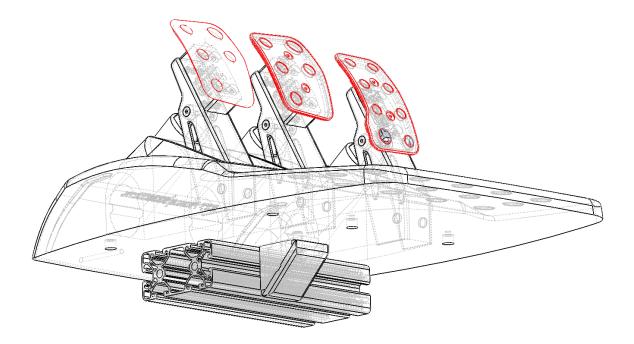

Adjust Pedal Bracket and Wheel Mount Assembly to desired position (see step 18 for a setup drawing).

OPTIONAL: Some pedals, like Thrustmaster or Logitech, have threaded holes on the bottom of the pedal base. To mount these type of pedals, please use the spare corner brackets. Mount 1 side to a pedaldeck-profile and the other to the pedals.

For Fanatec or Heusinkveld pedals you can use click-in-nuts and mount them 'from the top'.

Setting up your rig in the perfect way can take a lot of time and adjustments. Everybody is different, and with the enormous amount of sim racing gear available, it is impossible to draw you the perfect seating position. But this page should help you when tightening all the bolts for the first time. After you've build it up like this, you can then fine tune it to your own preferences.

Body length: 160 cm	Body length: 180 cm	Body length: 200 cm
A: 50 cm	A: 55 cm	A: 60 cm
B: 60 cm	B: 65 cm	B: 70 cm
C: 65 cm	C: 70 cm	C: 75 cm

When first building your rig, we recommend putting S on 35 cm. Don't tighten the bolts of the steering rack too much, 'cause there is a big chance you're going to adjust it after you mount a steering wheel.
