# TREQ ROOKIE

## **INSTRUCTION MANUAL**

The setup of your rig is very dependent on body type, personal seating preferences and the equipment you own, but to give you a head start, we included a setup scheme on the last page.

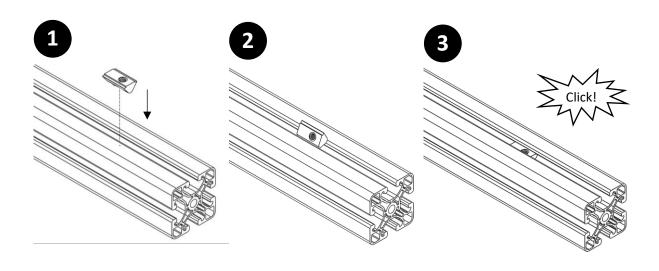

### **REQUIRED TOOLS:**

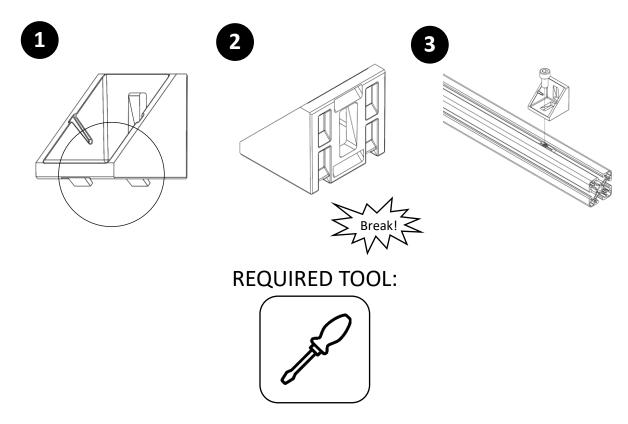

## **GENERAL INSTRUCTIONS**

The easiest way to mount the click-in-nuts, is to slide them in from one side of the profile. But don't worry if you need to put in a click-in-nut in a profile which has both ends already closed: it is also possible to push them in the T-slot anywhere you like!

The corner brackets feature 4 little hooks to stop the bracket from rotating once it is mounted on a profile. But on some places of the rig these corner brackets are placed on a 90° angle of the T-slot. In these situations it is recommended to break off 2 of the hooks, which is easily done with a screwdriver or a pincer.

Assemble the Wheel Mount Assembly on the rig.

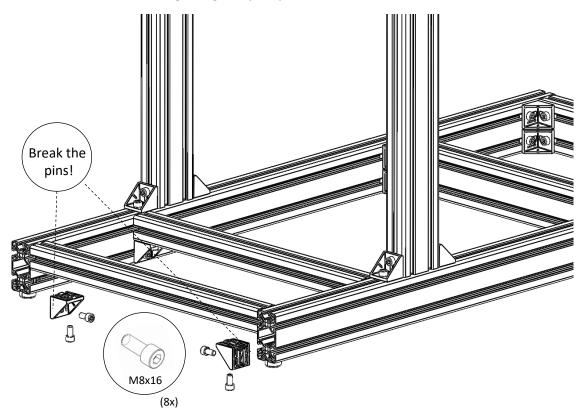

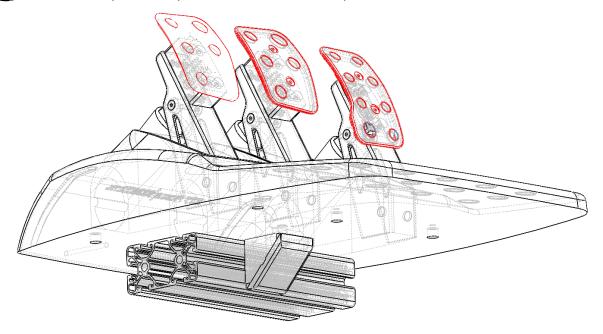

**15 A** 

Mount the two 4040 L=500 profiles as you wish. You can place the corner brackets on top, on the side, or below the profiles (as in the example below). You can also place one profile in line with the top slot, and the other in line with the bottom slot to create a slight angle of your pedals.

Some pedals, like Thrustmaster or Logitech, have threaded holes on the bottom of the pedal base. To mount these type of pedals, please use the spare corner brackets. Mount 1 side to a pedaldeck-profile and the other to the pedals.

For Fanatec or Heusinkveld pedals you can use click-in-nuts and mount them 'from the top'.
